Description:
The drug information component is designed to give the resident additional training and experience necessary to provide drug information in a clinical, research, managed care, or academic setting. Emphasis will be placed on efficient utilization of available resources, both electronic and text. Facilities remodeled in 2007.

The teaching component is designed to allow the resident to meet the requirements necessary to obtain a teaching certificate and gain valuable experience as a faculty member.

Resident responsibilities:
- Provide written and verbal responses to drug information requests received by the Center
- Assist pharmacy students in the use of drug information resources
- Supervise Pharm.D. candidates and pharmacy interns working in the center
- Attend meetings or seminars appropriate to enhance drug information skills
- Provide experiential instruction to Pharm.D. students during drug information and ONU HealthWise rotations
- Provide didactic instruction in the areas of therapeutics, drug information, and pharmacy practice
- Participate in various community outreach activities
- Design and complete a residency project
